

CASE STUDY: Park Monaco

ET Irrigation

ET Irrigation renovates irrigation system from scratch with plans created by Western Water Management starting in November 2018 and manages new system from April to October 2019.

GOAL

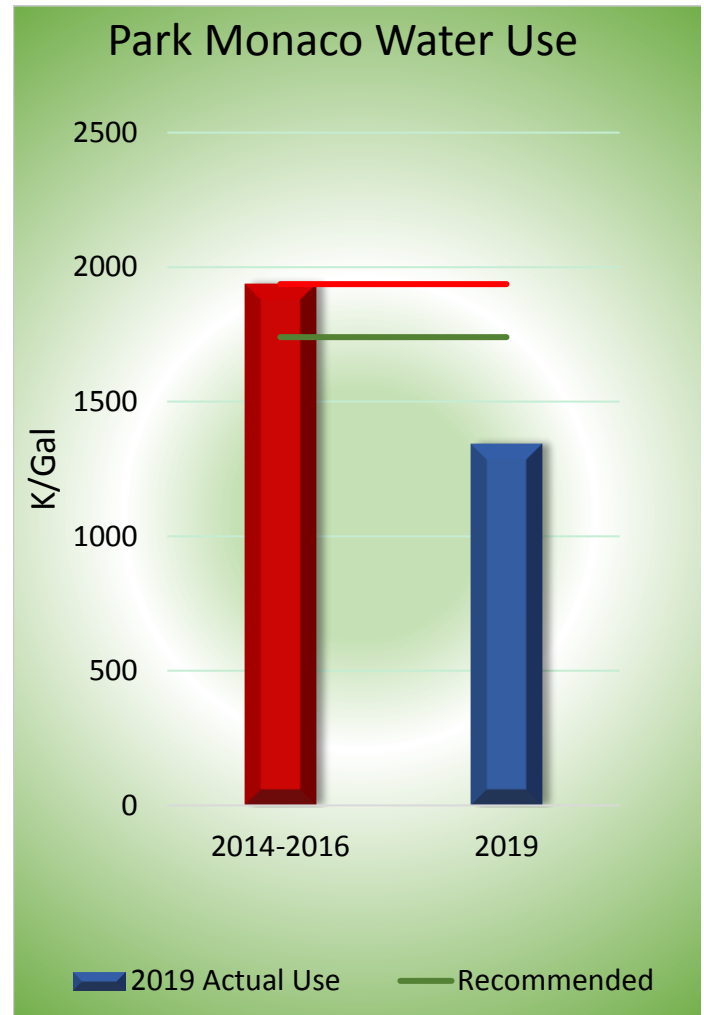

Replace current failing irrigation system with new system. Reduce overall water consumption creating long term efficiency while preserving a vibrant and healthy landscape and implement water management strategies to achieve water use targets.

PROCESS

- Conduct a water use analysis to identify savings potentials
- Create an Irrigation Plan
- Install both new inground and controller technologies.
- Initiate irrigation system renovation
- Implement sustainable irrigation management practices

RESULTS:

- **\$0 Repair cost 2019**
- **Water Use Reduction 30%**
- **\$10,000+ in Rebate funds**

“Our goal was to upgrade a 35+ year old Irrigation System to eliminate the exceedingly costly yearly maintenance and to create an efficient irrigation system that will provide the HOA with 30+ years of sustainable water consumption numbers relative to the landscapes water requirements.
