

CASE STUDY: FIELDSTONE HOA

ET Irrigation implements water conserving technologies and efficient irrigation management practices to oust water usage and receive conservation rebate funds for Fieldstone HOA.

CHALLENGE

Implement a plan to sustainably reduce landscape water use while preserving a vibrant, healthy, and visually appealing landscape. By incorporating tools and technologies Fieldstone HOA took advantage of the City of Aurora Conservation Rebate Program. ET Irrigation then fostered the water management strategies to achieve annual water use targets.

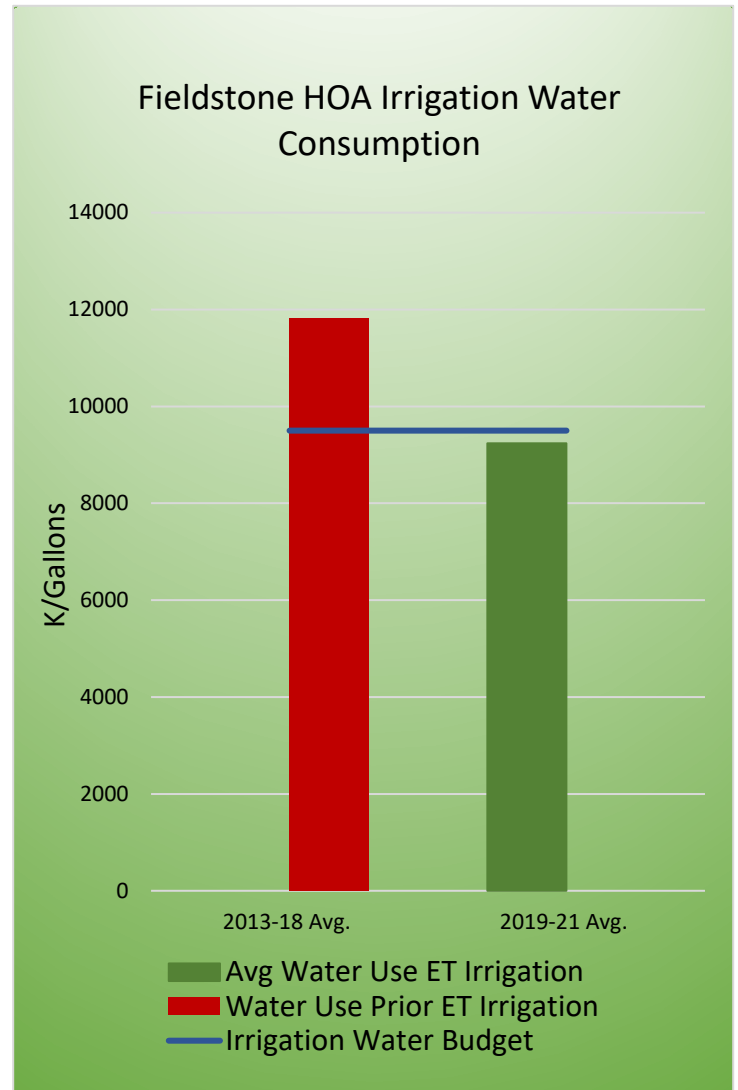

PROCESS

- Conduct a water use analysis to identify potential savings
- Create an Irrigation Map of controller zones
- Install weather-based irrigation controllers
- Initiate “in-ground” improvements to increase irrigation efficiency
- Implement sustainable irrigation management practices
